

Magaya Supply Chain

A single, powerful platform for logistics and supply chain management

Magaya Supply Chain is a complete solution that addresses all your logistics, freight management, and warehousing needs.

As the centralized foundation of your business, Magaya Supply Chain acts as a single system of record while delivering robust functionality for operations, accounting, visibility and tracking, connectivity, and compliance.

The solution comes complete with hundreds of document templates as well as freight forwarding and warehouse management workflows built to meet industry-specific needs for domestic and cross-border logistics.

Plus, you can leverage the collection of apps and extensions specifically for the logistics industry, enabling you to scale the Magaya Supply Chain solution to your changing needs and reducing costs for customization or integration.

The flexible and scalable solution allows you to use the modules you need to automate and optimize your business, with the ability to adopt more functionality as your business grows.

Magaya Supply Chain is a flexible solution for each link in the supply chain, ideal for:

- **Freight Forwarding**
- **NVOCC**
- **3PL**
- **Warehouse Management**
- **Courier Service**

BENEFITS

One Platform

Our single platform eliminates data silos, enables real-time visibility, and provides you with a holistic view of your business with unparalleled functionality. Magaya features a powerful WMS core with cross-border logistics that enables you to take your operations to the next level.

Highly Scalable

Our robust and highly scalable software platform easily adapts to your changing demands, supporting your growth. Our open API framework gives you the flexibility to integrate with other platforms, allowing you to accomplish more.

Increased Efficiency

Magaya enables you to eliminate double data entry and allows you to stay in compliance with U.S. and international customs integrations, which connect directly with the rest of your transactions and workflows.

Cloud-Based

Benefit from added versatility, security, reliability, and lower IT costs in the cloud.

SHIPPING & FREIGHT FORWARDING

- Avoid double data entry by creating bookings, pickup orders, warehouse receipts, shipments, invoices, and pulling information directly from quotes.
- Expedite the quote process with our open quote templates, allowing for quick quotations to be created.
- Efficiently liquidate shipments, plus create accounting transactions, for entire consolidations with one click.
- Easily create shipments and print labels with FedEx, UPS, and USPS directly from the system.
- Connect to an ACE-certified ABI solution focused on compliance, security, and technology.
- Easily find and enter the FIRMS or facility name on the shipment for use on the delivery order as well as filing 7512 and 7501.

WMS

- Enable seamless workflows between warehousing and shipping, allowing you to load cargo directly onto outbound shipment.
- Optimize your warehouse operations by mapping out arrival locations, plus facilitating put away and picking, with a directed operations sequence.
- Manage your workday with real-time inventory, orders, and operations visibility.

PO MANAGEMENT

- Stay organized with a record of arrival and location of cargo, SKUs, serial numbers, lot numbers, and expiration dates.
- Easily send tracking numbers and inventory updates to the online sales channel the moment you ship the order.
- Catch any discrepancies in POs reported through Magaya Supply Chain.

ACCOUNTING

- Avoid double data entry by easily converting the information in the POs into other related transactions such as pickup orders, warehouse receipts, or bills.
- Gain complete visibility of a shipment down to a line-item level, allowing for compliance with customs.
- Ensure the right duties are being paid by having shipment items classified correctly through customs clearance.
- Automate your workflows, including recurring billing and periodic invoices.
- Work with multiple currencies in all of our accounting features.

PRODUCTIVITY, INTEGRATION, AND CUSTOMIZATIONS

- Seamlessly transfer your information between all your logistics transactions to create the necessary accounting records.
- Can be easily configured to connect with various accounting, order processing, and other third-party systems.
- Consult dashboards across multi-department operations.
- Generate financial, cargo, open invoice reports and automatically send via email to customers at a pre-scheduled time with the Report Scheduler.
- Minimize manual entry by inputting the Release Type, G.O. Date, and Customer Reference on the shipment that can be utilized for documentation, tracking, and subsequent operations.
